My research addresses the question of how stress unfolds within social contexts of varying degree and complexity. Within dyadic and small-group contexts (e.g., family), I am interested in understanding how individuals cope with stress together and transmit stress across roles and settings. Implicated here is the individual's ability to make meaning of stressful or traumatic experiences, particularly those which compromise physical, mental, or social health. On the sociocultural level, I am interested in describing how individuals cope with stress arising from disease outbreaks, pandemics, and other collective threats to health and well-being, such as climate change. In this latter pursuit, I address the question of how people behave to influence (and potentially mitigate) the threat itself, according to both intra- and interpersonal motivations. In this way, my research examines stress within social contexts of increasing complexity, from dyads to communities. Other interests include the long-term effects of trauma among healthcare professionals (e.g., paramedics) and the application of transactional models of stress and coping to clinical, 'invisible,' and otherwise vulnerable populations (e.g., older adults, Holocaust survivors, Indigenous and LGBTQ people,).

TEACHING & MENTORSHIP

My teaching experience at the university level is demonstrated by over five years of employment as a sessional instructor and nearly 12 years of experience as a teaching assistant, an undergraduate seminar leader, and a guest lecturer in psychology. I currently lead three undergraduate courses at UBC: Health Psychology (PSYC-314), Personality Psychology (PSYC-305A), and Psychology of Death & Dying (PSYC-208). This is in addition to recently joining the Extended Learning team of instructors at UBC, designing and directing a variety of continuing studies workshops, seminars, and programs aimed at supporting learning in psychology at the community level. Across roles, I strive to encourage critical thinking and reliability in the social and behavioural sciences, as is further demonstrated by my co-authorship on two Canadian textbooks. I define my teaching philosophy as engaging and collaborative learning through progressive teaching, which underscores my goals of high student engagement and student-instructor collaboration.

STUDENT MENTORSHIP

In my time at Trent University and the University of British Columbia, I have had the opportunity to supervise numerous undergraduate students in both research practicum and honours thesis programs. I have assisted with over twenty different student projects and activities during my time as a graduate student, postdoctoral research fellow, and sessional instructor. This has not been done for the sole purpose of assisting in my own research activities; indeed I draw a great deal of satisfaction and inspiration from the mentorship of young and aspiring researchers and psychologists.
